Unlocking the Mysteries of Muscle Metabolism in the Animal Sciences

Message from the Guest Editors

Muscle growth or meat production is a complex biological process that results from the orchestration of a hierarchy of anabolic and catabolic events that are tightly synchronized with nutrient availability. When muscle cells 'sense' that energy substrates and amino acids are available, protein accretion and muscle growth proceeds. Conversely, when nutrient assets are limiting, either through gaps in management strategies, or during times of redirected nutrient partitioning as is the case with compromised health status or heat stress, muscle growth is curtailed, or even reversed if the insult is severe enough. To address these varied stimuli, muscle cells utilize highly integrated signaling cascades to sense and respond to nutritional cues in their residential niches. The existence and integration of these pathways are poorly understood but identification of novel processes will further empower animal scientists to monitor changes in metabolic status of growing tissues and inevitably foster discovery of new strategies for improving the efficiency of animal growth.

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Editor-in-Chief

Internal Medicine, Ospedale Civile di Baggiovara, Azienda Ospedaliero-
Universitaria, 41126 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.7 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the second half of 2025).
