

## Special Issue

# Effects of the Glutamatergic System on Metabolic Alterations

### Message from the Guest Editors

Glutamate is the major excitatory neurotransmitter in the central nervous system (CNS). Receptors for this amino acid are widely distributed in both neurons and glia in the brain, as well as in the spinal cord. Moreover, glutamate pathways are linked to many other neurotransmitter pathways. Glutamate is known to play an important role in many physiological processes. The undisturbed regulation of glutamate metabolism is crucial for the synthesis and oxidation of amino acids and the proper functioning of the CNS.

In our Special Issue entitled “Effects of the Glutamatergic System on Metabolic Alterations”, we would like to bring together experts examining the relationship between the glutaminergic system and metabolic changes, which may contribute to understanding the mechanisms underlying the pathophysiology of various CNS diseases, and thus identifying new targets for substances that may be helpful in their therapy. Authors from various fields are encouraged to submit original scientific articles or reviews related to the effects of the glutamatergic system on metabolic changes.

## About the Journal

### Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.7 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the second half of 2025).
