

Special Issue

Exploring Uric Acid and Beyond

Message from the Guest Editors

Serum uric acid (UA) is a clear and an independent predictor of all-cause and cardiovascular mortality but also acute coronary syndrome, stroke, and heart failure. Moreover, a high UA level is a risk factor for the new onset and progression of chronic kidney disease (CKD). In the CKD field, the new therapeutic era of the sGLT2i, with its uricosuric effects, has allowed new stimulating research inputs into the management of the UA-CKD interplay. New and interesting insights into the correlation between hyperuricemia and metabolic derangement have been emerging from extended research papers that have clarified that the UA is a causative pathologic element of metabolic syndrome, diabetes, obesity, and dyslipidemia. The relationship between hyperuricemia and the immune system, with its role as a danger signal in immunity and inflammation, has been a growing research interest for our and other working groups. The aim of this Special Issue is to review the role of UA as a global risk factor in medicine, with particular attention to special subgroup populations, i.e., CKD, obese, and diabetic patients.

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Editor-in-Chief

Internal Medicine, Ospedale Civile di Baggiovara, Azienda Ospedaliero-Universitaria, 41126 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.7 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the second half of 2025).
