## Resting Metabolic Rate and Health

### Message from the Guest Editors

Dear colleagues, In humans, the resting metabolic rate normally accounts for 60–70% of energy expenditure over 24 hours (e.g., in healthy sedentary adults). In simple terms, among other metabolic implications, a low resting metabolic rate (or a low energy expenditure while resting) could be considered as an indicator of potential weight (re)gain in the future, as suggested by the previous literature. This Special Issue of *Metabolites* will be dedicated to extensive applications of resting metabolic rate assessments, as well as related methodological perspectives that may be of interest for the resting metabolic rate assessment field. The topics that will be covered by this Special Issue include, but are not limited to, the relationship between resting metabolic rate and health-related biomarkers, metabolic implications of the resting metabolic rate, and other methodology aspects to improve the resting metabolic rate assessments. Manuscripts dealing with other challenging issues are also highly desired.

### Guest Editors

Dr. Juan M. A. Alcantara

1. Department of Education, Faculty of Education Sciences, SPORT Research Group (CTS-1024), Research Centre for Well-Being and Social Inclusion (CIBIS), University of Almería, Almería, Spain  
2. Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y Nutrición (CIBERObn), Instituto de Salud Carlos III, Madrid, Spain

Dr. Abel Plaza-Florido

Pediatric Exercise and Genomics Research Center, Department of Pediatrics, School of Medicine, University of California, Irvine, CA 92697, USA

### Deadline for manuscript submissions

closed (31 May 2024)

## About the Journal

### Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.7 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the second half of 2025).
