Improvement of Metabolic Profile of Obesity and Obesity-Related Injury

Message from the Guest Editor

Dear Colleagues Obesity is a chronic disease characterized by excessive adipose tissue accumulation in the body. Its prevalence has significantly increased in recent decades. The causes of obesity are multifactorial and involve the interaction of genetic, metabolic, social, behavioral, and cultural factors. Obesity has emerged as a significant public health issue due to its numerous health consequences, which range from an elevated risk of premature death to the development of serious conditions such as type 2 diabetes mellitus, cancer, nonalcoholic fatty liver disease, and cardiovascular diseases. These conditions directly impact the quality of life of affected individuals. Therefore, this Special Issue aims to address the need for a better understanding of the pathophysiological mechanisms underlying obesity and its related diseases. Additionally, it aims to explore therapeutic and preventive strategies for these conditions.

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Editor-in-Chief

Dr. Amedeo Lonardo

Internal Medicine, Ospedale Civile di Baggiovara, Azienda Ospedaliero-Universitaria, 41126 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.4 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
