

Special Issue

Lipid and Lipoprotein Metabolism Volume 2

Message from the Guest Editor

This is the second Special Issue devoted to examining lipid and lipoprotein metabolism. Several classes of lipid exist, which can function as integral components of cell membranes, supply energy to cells via oxidation, and act as mediators of cell signalling and gene expression. These lipids may be derived from diet or de novo synthesis. Many of these lipids may be carried through the bloodstream within lipoproteins, which themselves can be metabolized to supply cells and tissues with lipid metabolites for immediate use or for storage. Tissue lipids may be further metabolized into other unique metabolites, depending on the tissue and cell type; these metabolites can elicit specific functions under normal and pathological conditions. This second Special Issue on lipid and lipoprotein metabolism welcomes original research as well as methodologies toward the identification and characterization of novel metabolites. Thorough narrative reviews will also be considered.

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Editor-in-Chief

Dr. Amedeo Lonardo

Internal Medicine, Ospedale Civile di Baggiovara, Azienda Ospedaliero-Universitaria, 41126 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.4 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
