

## Special Issue

# Metabolomics in Drug Metabolism, Drug-Drug Interactions, and Drug Toxicity

### Message from the Guest Editor

Issues related to drug safety remain a major bottleneck in drug discovery and development. Recent technological advancements in metabolomics have helped us to gain insights into the mechanisms of drug toxicity, translatability to humans, prediction of safety events, mitigation of side effects, and development of safety biomarkers. Metabolomics applied to drug metabolism, drug–endobiotic interactions, and drug–drug interactions offers an ideal opportunity to study the toxicological effects of drugs. This Special Issue is devoted to metabolomics in drug metabolism, drug–drug interactions, and drug toxicity. The topics that will be covered include studies on the metabolomic analyses of the fate of drugs and host responses to drugs (including new modalities such as peptides, antibody–drug conjugates, protein therapeutics, and oligonucleotide therapeutics), as well as endogenous probes for drug–drug interactions. Additional topics include metabolomic analyses of studying the mechanism, prediction, and safety biomarkers of drug toxicity.

## About the Journal

### Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2024).
