

Special Issue

Endocrinology, Pediatric Diabetes, and Metabolism

Message from the Guest Editor

Hormones play a central role in child growth and development. Dysfunctions in growth, puberty, and sexual development, diabetes, thyroid disorders, and childhood obesity represent the most common endocrinological problems that may occur in children and adolescents. This Special Issue “Endocrinology, Pediatric Diabetes, and Metabolism” aims to publish original research articles, reviews, clinical studies, case reports, and editorials covering important clinical, translational, and basic research in pediatric endocrinology, diabetes, and the metabolic aspects of endocrinological diseases.

Guest Editor

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Editor-in-Chief

Dr. Amedeo Lonardo

Internal Medicine, Ospedale Civile di Baggiovara, Azienda Ospedaliero-Universitaria, 41126 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.4 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
