

Special Issue

Advances in Murine Models for Metabolic Diseases: Insights into Diabetes, Obesity, and Cardiovascular Conditions

Message from the Guest Editor

This Special Issue aims at providing a comprehensive overview of the current state of the art in murine models of metabolic diseases. It serves as a valuable resource for researchers in the field, facilitating the exchange of knowledge and fostering collaborations. By highlighting recent advances and identifying knowledge gaps, this Special Issue will guide future research and accelerate the development of effective strategies for preventing and treating human metabolic disorders.

About the Journal

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Editor-in-Chief

Dr. Amedeo Lonardo

Internal Medicine, Ospedale Civile di Baggiovara, Azienda Ospedaliero-Universitaria, 41126 Modena, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 14.4 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
