Message from the Guest Editors

Dear Colleagues,

With the development of metal-matrix composites (MMCs), carbonaceous reinforcements such as graphite particles, carbon nanotubes, graphene, SiC particles etc. have received increasing attention owing to their lower density, perfect elastic modulus and strength, good thermal conductivity, and excellent electrical properties. Simultaneously, the preparation technologies for MMCs are also developing—advanced equipment and technology are applied in powder metallurgy, semisolid forming, die casting, etc. Thus, the current Special Issue focuses on carbon-reinforced MMCs, including but not limited to advanced MMCs, preparation technology and performance.

Dr. Suqing Zhang

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
