

Superalloys and Ceramic Matrix Composites Behaviors under Extreme Conditions

Guest Editors:

Dr. Ali Abdul-Aziz

Department of Aerospace Engineering, College of Aeronautics and Engineering, Kent State University, Kent, OH 44242, USA

Dr. Theodore E. Matikas

Mechanics, Smart Sensors and Nondestructive Evaluation (MSS-NDE) Laboratory, Department of Materials Science and Engineering, University of Ioannina, Ioannina, Greece

Deadline for manuscript submissions:

30 November 2024

Message from the Guest Editors

This Special Issue seeks contributions that address the behavior of super alloys and CMCs under extreme conditions. We encourage original research articles, reviews, and case studies that encompass a wide range of topics, including but not limited to the following:

- Experimental investigations and observations of behavior in super alloys and CMCs;
- Analytical modeling and simulation techniques to assess fatigue life and predict failure;
- Applications and case studies in aerospace, defense, automotive, energy and power, and electrical and electronics industries;
- Advanced non-destructive evaluation (NDE) techniques for fault identification and characterization;
- Comparative studies on the performance and durability of super alloys and CMCs under extreme conditions.

Contributions should provide valuable insights into the behaviors of superalloys and CMCs, supporting the broader understanding of material performances in extreme environments. Moreover, this collaborative effort will facilitate knowledge exchange, foster advancements in analytical modeling, and aid in the development of more reliable fatigue life prediction techniques.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
