Deadline for manuscript submissions:  
closed (31 July 2024)

**Message from the Guest Editor**

Titanium alloys are promising structural and functional materials in aerospace and civil applications. As Ti alloys act as both low-weight metallic material and smart material with shape memory properties and low elastic modulus, the research and development of both available and new Ti alloys are vital for the Ti society. This Special Issue explores the design, phase transformation, microstructure evolution, deformation behavior, and mechanical properties of Ti alloys in order to shed light on the titanium research. Articles concerning the design, processing, and mechanical properties of Ti alloys, as well as their deformation mechanisms, are welcome. This Special Issue will cover—but is not limited to—the following fundamental and applied research topics: alloy design; thermal-mechanical processing; post-heat treatment; precipitation; microstructure evolution and mechanical properties; deformation behavior and mechanism; shape memory; superelasticity; simulation; additive manufacturing; martensitic transformation; biomedical applications.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
