Message from the Guest Editors

Dear Colleagues,

the 2nd International Conference on Light Materials LightMAT 2017 (<https://lightmat2017.dgm.de>) gives a comprehensive overview and new insight into the three most important light metals: Aluminium, magnesium, and titanium, and their combinations. These materials are viewed individually or in combination in multi-material designs, including aspects of processing, joining, and corrosion protection. In addition, promising enabling-technologies, such as additive manufacturing are highlighted.

This Special Issue on “Light Materials” is set to publish selected works presented at this event, in order to share recent progress and new achievements in this emerging field with broader scientific and industrial communities.

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science) and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 14 days after submission; acceptance to publication is undertaken in 4.3 days (median values for papers published in the first six months of 2018).
