Fracture Mechanics of Metals

Guest Editors:

Prof. Dr. Stergios Maropoulos

Department of Mechanical Engineering, University of Western Macedonia, 50150 Kozani, Greece

Dr. Le Chang

School of Mechanical and Power Engineering, Nanjing Tech University, Nanjing, China

Message from the Guest Editors

This Special Issue is focused on recent developments in the fracture mechanics of metals. Fracture is the separation of an object or material into two or more pieces under the action of stress. The fracture of a solid usually occurs due to the development of certain displacement discontinuity surfaces within the solid. Fracture is categorized between ductile fracture, brittle fracture and ductile-to-brittle transition temperature.

Deadline for manuscript submissions:
closed (31 March 2024)

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compindex, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
