

Leaching/Bioleaching and Recovery of Metals

Guest Editors:

Prof. Dr. María Luisa Blázquez Izquierdo

Department of Chemical and Materials Engineering,
Complutense University of Madrid, Madrid, Spain

Prof. Dr. Jesús A. Muñoz Sánchez

Department of Chemical and Materials Engineering,
Complutense University of Madrid, Madrid, Spain

Dr. Laura Castro

Department of Chemical and Materials Engineering,
Complutense University of Madrid, 28040 Madrid, Spain

Deadline for manuscript submissions:

closed (30 June 2021)

Message from the Guest Editors

Hydrometallurgical processes for metal extraction are becoming more and more popular as average ore grades are declining and huge tonnages of tailings and recycle materials containing valuable metals are being accumulated all around the world. Hydrometallurgy and more recently bio-hydrometallurgy have brought some added value to these processes, since they can recover large amounts of metals using aqueous solutions and chemical reagents that could be provided by certain microorganisms. In addition, environmental risks associated to the accumulation of hazardous residues from metallurgical industries could be overcome by applying bio/hydrometallurgical methods. Hydrometallurgy of base metals, particularly Cu, Zn, Ni, etc., is a well-documented process, but other metals, particularly strategic ones (cobalt, lithium, rare earths, etc.) have not yet deserved so much attention by the scientific community. In the same way, the field of bio-hydrometallurgy has been focused mainly on a few metals, so there is still room for improvement.

an Open Access Journal by MDPI

Editors-in-Chief

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy and Metallurgical Engineering*) / CiteScore - Q1 (Metals and Alloys)
