

## Performance and Behaviour of Metallic Nuclear Fuels and Cladding Materials

Guest Editor:

**Dr. Robert W. Harrison**

Nuclear Fuels Centre of  
Excellence, Department of  
Mechanical, Aerospace and Civil  
Engineering, University of  
Manchester, Oxford Road,  
Manchester M13 9PL, UK

Deadline for manuscript  
submissions:

**closed (31 August 2022)**

### Message from the Guest Editor

Metals, alloys and intermetallics are of high interest to the nuclear industry due to their extensive use in nuclear fuel assemblies. The development of novel metallic nuclear fuels, fuel claddings and coating materials is driving the deployment of accident tolerant fuel (ATF) technology into the current generation of nuclear power plants. In addition, new high-density metallic fuels (HDFs) offer the possibility of replacing highly enriched uranium fuel (HEU), which is currently used in test reactors, with lower-enriched fuels with the aim of reducing proliferation risks. However, through their deployment, these novel metallic fuels, cladding and coating materials may be exposed to high levels of radiation damage and burnup, high temperature environments and oxidative or corrosive atmospheres. This can occur during normal operation or in off-normal accident scenarios, particularly in water-cooled nuclear reactors.

## Editors-in-Chief

### **Prof. Dr. Hugo F. Lopez**

Department of Materials Science  
and Engineering, College of  
Engineering & Applied Science,  
University of Wisconsin-  
Milwaukee, 3200 N. Cramer  
Street, Milwaukee, WI 53211, USA

### **Prof. Dr. Yong Zhang**

Beijing Advanced Innovation  
Center of Materials Genome  
Engineering, State Key  
Laboratory for Advanced Metals  
and Materials, University of  
Science and Technology Beijing,  
30 Xueyuan Road, Beijing 100083,  
China

## Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus**, **SCIE (Web of Science)**, **Inspec**, **CAPLUS / SciFinder**, and **other databases**.

**Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q1 (*Metals and Alloys*)
