Deadline for manuscript submissions: closed (30 June 2020)

### Message from the Guest Editor

Dear Colleagues,

The mechanical properties originate from the alloy composition and processing history and through the microstructure development. Quite often, a successful processing technology was designed to utilize a particular strengthening mechanism: grain refinement, phase balance, precipitation or solid solution strengthening. This could be determined by particular product requirements, the available equipment, cost, or company tradition. new challenges for further However. property enhancement require a review of the capacity of strengthening mechanisms. Are the precipitates more effective than solute atoms? What is the most reasonable size of grains in a polycrystalline alloy? What state of dislocation structure is required and what criteria define this? How many phases of microstructure do we need? Will the multi-principle element alloys become the future of alloy chemistry? Will the rolling and forging disappear, and will casting, powder pressing and 3D printing dominate in the technology space? Research articles, communications or reviews on these questions are very welcome to this Special Issue, irrespective of alloy composition or processing technology.

## **Editors-in-Chief**

#### Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

#### Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

### **Message from the Editorial Board**

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure - disciplines in metallurgical field the ranging from processing. mechanical behavior. phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

# **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases. **Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q1 (*Metals and Alloys*)
