

Thermodynamic Modeling of Metallurgical Processes

Guest Editors:

Dr. Minkyu Paek

Department of Chemical and Metallurgical Engineering, Aalto University, Espoo, Finland

Dr. Hongyeun Kim

Department of Materials Science and Engineering, The Pennsylvania State University, USA

Deadline for manuscript submissions:

closed (31 August 2021)

Message from the Guest Editors

Thermodynamic modeling is important, especially for the design of metallurgical processes. Many technological problems will be solved by the thermodynamic modeling approach, because the critical assessment in the multicomponent systems enables us to provide the useful thermodynamic knowledge on the complicated chemical reactions in the various metallurgical processes.

This Special Issue invites research that contributes to thermodynamic modeling of metallic systems integrated with critical experiments or aided by first-principles calculations. In particular, thermodynamic applications, including pyrometallurgy, extractive metallurgy, and electrochemical processes, are encouraged. Research may address but is not limited to the area below:

1. Refining of liquid steel and alloys;
2. Extraction of valued metals from industrial wastes;
3. Solid-phase equilibria and phase transformation of alloy systems;
4. Process simulation based on thermodynamic calculation;
5. Experimental and computational studies that investigate chemical and physical properties of alloys and compounds.

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compindex, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)
