

Special Issue

Corrosion Behavior of Carbon Steels in Natural and Industrial Environments—2nd Edition

Message from the Guest Editor

Dear colleagues, Carbon steel degradation upon exposure to natural environments is a major issue with regard to the cost of metallic corrosion in all sectors of engineering. This Special Issue, entitled “Corrosion Behavior of Steels in Natural and Industrial Environments”, addresses all relevant aspects of carbon steel corrosion, including basic corrosion mechanisms in atmospheric conditions or aqueous media, kinetic studies under quiescent and hydrodynamic conditions, different forms of corrosion, instrumental analysis for corrosion product characterization, surface morphology corrosion rate determination, biocorrosion characterization, and industrial applications under exceptional conditions where carbon steel exhibit high corrosion resistance. Articles regarding corrosion prevention are also welcome, particularly corrosion inhibition by natural products, cathodic protection in the form of either impressed currents or sacrificial anodes, and results from long-lasting corrosion studies regarding different corrosion prevention techniques for carbon steel structures in rural areas, industrial infrastructure, and pilot experiments.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
