

Special Issue

New Trends of Powder Engineering and Additive Manufacturing (Editorial Board Members' Collection Series)

Message from the Guest Editors

Powder metallurgy is a set of fabrication techniques related to three major processing steps. First, the precursor material is physically powdered (micro- or nanometric particles). Second, the powder is consolidated to obtain bulk specimens (traditionally by injection into a mould or passed through a die). Third, pressure and/or temperature is applied. Powder metallurgy is now also applied in the production of composites. Furthermore, new topics have emerged, such as the circular economy or raw materials. In this Special Issue, we expect manuscripts related to new trends in materials (such as high-entropy alloys) and processes (additive manufacturing, unconventional sintering processes). Articles on a) mechanical properties: (fatigue, plasticity, creep), b) physical response (magnetic, electric) and/or c) oxidation–corrosion are welcome, as are review articles.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
