

Special Issue

Forging of Metals and Alloys

Message from the Guest Editors

Known to be amongst the oldest known metalworking processes, forging is a manufacturing process which involves the shaping of metal using localized compressive forces. As the metallic billet is shaped plastically during the forging process, microstructural evolution behaviors including grain refinement, texture variation, and compound discretization occur simultaneously. As a result, forged components exhibit better mechanical properties than the components manufactured by equivalent casting or machining. The scope of the current Special Issue embraces interdisciplinary works aimed at understanding and deploying plastic deformation mechanisms of metals, multi-scale behaviors of metals during forging, advancing experimental and theoretical forging analysis, the innovative structural design and fabrication of forging die, and the application of improved forging equipment. Manuscripts will be welcomed from both fundamental scientific researchers and authors belonging to industrial companies involved in the field.

Guest Editors

Dr. Yi Meng

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the second half of 2025).
