

Special Issue

Advanced Simulation and Modeling Technologies of Metallurgical Processes

Message from the Guest Editor

The numerical methods for metallurgical processes nowadays cover a wide array of applications, such as multiphase flow, multi-physics processes, optimization, and process simulation. The detailed and vast amounts of simulation data allow a thorough analysis of the relevant processes and their interactions that reveal the underlying physics. Hereby, we tried to select contributions which focus on innovative models/techniques/methods and provide some new insights into the different areas of metallurgical processes in ironmaking and steelmaking. In this Special Issue, we seek to provide a wide set of articles on various aspects of simulation and modeling technologies in metallurgical processes. Articles on the ironmaking and steelmaking process are desired, such as data-driver modeling in sintering, blast furnaces and basic oxygen furnaces, gas-solid flow behavior by means of CFD, particle motion behavior by means of the discrete element method (DEM), new process development based on carbon peaking and carbon neutralization, the application of mathematical models, new methods of visualization and intelligence, and so on.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2025).
