

Special Issue

Nanostructured Metallic Materials: Preparation, Properties, and Applications

Message from the Guest Editors

The goal of this Special Issue is to review various applications and technologies of research on nanostructured metallic materials (NMMs), which have been rapidly diversifying in recent years. Recently, the introduction of the nanostructure in advanced engineering alloys is spreading, in the form of new deformation mechanisms being developed or novel concepts such as damage tolerance and self-healing being proposed. In addition, new processes for manufacturing nanoparticles, nanofoams, and nanocomposites have been actively developed. Due to their large surface area, these novel NMMs exhibit high activity as various functional materials, such as electrodes for water splitting and dye degradation, exhibit new phase transformation behavior by affecting phase stability, and improve toughness by inhibiting crack propagation. Furthermore, nanostructure design is emerging as a major concern in additive manufacturing and combinatorial deposition. In this Special Issue, we hope to review the current status of nanostructure design and understand the challenging fundamental issues common to various metallic materials applications.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the second half of 2025).
