

Special Issue

Microstructure and Properties of Rolled Alloys (Volume II)

Message from the Guest Editors

Roll forming is an important aspect of advanced manufacturing technologies, which has the significant advantages of reducing energy consumption and cost, improving the comprehensive performance of metals and alloys, and having a high production efficiency and wide application range. In recent years, rolling technology has made great progress in the control and regulation of material structures and properties, and plays the leading role in the application of automation and information technology. The aim of this Special Issue, "Microstructure and Properties of Rolled Alloys", is to showcase the latest progress and achievements of rolling technology in the field of material preparation; to summarize the future directions, key technologies, and recurrent issues in this field; and to promote the innovation and application of rolling technology. Researchers that have engaged in the roll forming of Cu alloys, Al alloys, Ti alloys, Mg alloys, Ni alloys, steel, high-entropy alloys, and other alloy materials are invited to submit articles for publication.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the second half of 2025).
