Environmental Degradation of Multi-Principal-Element Alloys: Aspects of Corrosion and High-Temperature Oxidation

Message from the Guest Editor

Multi-principal-element alloys (MPEA) and high-entropy alloys (HEA) have attracted the attention of the metallurgy community because of the distinct and innovative concept on which their preparation is based. This concept involves the combination of several main elements in substantial concentrations, potentially resulting in metals with properties superior to those of traditional alloys. This Special Issue calls for high-quality papers, reports, and review articles on all aspects of corrosion and high-temperature oxidation behavior of MPEA in harsh environments, including but not limited to areas such as polarization behavior, passivity, selective leaching, corrosion mechanisms, testing, and protection, stress corrosion cracking as well as oxidation kinetics, selective and pest oxidation, scale formation, and coatings.

Guest Editor

Prof. Dr. Carlos Alberto Della Rovere

Department of Materials Engineering (DEMa), Federal University of Sao Carlos (UFSCar), Rodovia Washington Luis, km 235, São Carlos 13565-905, SP, Brazil

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
