

Special Issue

Assessment of Multifunctional Nanostructured Coatings/Metal Interfaces in Extreme Environments

Message from the Guest Editor

Nanostructured multifunctional coatings as single layer or multilayers covering metallic substrates are among the most highly-exploited research systems in the field of corrosion science and engineering. The manufacture, design and test of high-performance nanoparticles that are either electroactive or are capable of serving as physical protection layers provides unprecedented functionality and opportunities for multifunctional coatings protecting the metallic alloys. The experimental, theoretical, computer simulation and field conditions approach are endless; however, challenges like performance assessment modeling and experimental, corrosion control mechanisms, localize attack monitoring and simulation, in situ high resolution electrochemical techniques, matrix and control over interfacial interactions with extreme (corrosive, temperature and stress) environments are yet to be completely resolved. Towards this goal, we are assembling a Special Issue of journal *Metals* to encourage researchers worldwide and to provide them with a platform to publish their novel studies.

Guest Editor

Prof. Dr. Homero Castaneda

Materials Science and Engineering, Director of the National Corrosion and Materials Reliability Center, Texas A&M University, College Station, TX, USA

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
