Metal-Ceramic Composites Fabricated by Powder Metallurgy Method

Message from the Guest Editors

Ceramic-reinforced metal matrix composites (metal-ceramic composites) have attracted much attention for a long time and have been applied in many fields, such as automobile, aerospace, electronic industry and so on. This is because various properties of metals, such as their mechanical and wear resistance and high-temperature performance, can be effectively improved through the composite of ceramic materials. The development of metal-ceramic composites, mainly benefits from the improvement of preparation methods and the application of new technologies. In this Special Issue, entitled Metal-Ceramic Composites Fabricated by Powder Metallurgy Method, we welcome articles that focus on the following aspects: (1) the improvement and optimization of the preparation process, including the improvement of the traditional process and the application of new technology; (2) the adaptation relationship between different types of composite systems and the preparation processes; (3) the microstructure control, especially the nanoization of the reinforcement and the control of the interface, as well as the relationship between the microstructures and properties.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the second half of 2025).
