

## Special Issue

# Ferrous Powder Metallurgy— State of the Art

### Message from the Guest Editor

The driving force of any manufacturing process utilizing metal powders as the base material is the minimization of residual porosity to improve mechanical properties. Densification can be achieved via multiple strategies related to particle consolidation, sintering as well as post-sintering operations. On the other hand, approaches can also be devised to mitigate the detrimental effect of porosity on mechanical properties of powder metallurgy components. Ferrous materials constitute by far the most important alloy system in the PM industry. Owing to the near-net shape ability of powder-based manufacturing processes, PM ferrous components are increasingly replacing wrought steels in numerous applications. To support the growth in use of PM steel parts, it is essential to maximize their mechanical properties while maintaining production costs below those of more conventional fabrication processes. The importance of this subject has encouraged us to organize a Special Issue of Metals that focuses on research topics at the cutting edge of development related to ferrous PM. Therefore, we are inviting manuscripts that reflect the state of the art in this field.

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei  
Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.7 days after  
submission; acceptance to publication is undertaken in 2.7  
days (median values for papers published in this journal in  
the second half of 2025).
