

## Special Issue

# Hot Forming/Processing of Metallic Materials

### Message from the Guest Editors

Hot forming/processing of metallic materials (e.g., metal alloys and composites) is a critical manufacturing process to fabricate materials/components/products to meet specific requirements of practical engineering application. Thus, the special issue will focus on metallic material processing via both conventional and nonconventional manufacturing technology approaches. Contributions to this issue will represent papers from the academic field as well as the industrial field. Papers should provide a basis for further use and extraction of introduced knowledge by the scientific and technical society.

This Special Issue is open to anyone who is familiar with the current state of metallic materials forming and post-processing technologies. Papers on (non)conventional processing/forming technologies of metallic materials and the related theoretical and experimental studies are all welcome. Appropriate submissions to this specific issue should include scientific and/or engineering factors which affect metallic materials' processing–microstructure–properties relationship and/or report changes to materials' performance.

---

### Guest Editors

Pro. Dr. Fei Yang

School of Engineering Teaching and Research, University of Waikato, Hamilton, New Zealand

Prof. Dr. Fantao Kong

School of Materials Science and Engineering, Harbin Institute of Technology, Harbin 150001, China

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
