Special Issue

Research on Green and Environmentally Friendly Lead-Free Solder and Advanced Interconnect Technology in Electronic Packaging

Message from the Guest Editor

In the process of connecting microelectronics, the industry not only needs to prohibit the doping of harmful elements from the source, but also ensure the reliability of the connection. This requires researchers to propose new strategies in terms of connection technology, materials and structural design. Since the end of the 1990s, many researchers have attempted to improve the reliability of tin-based solder and to regulate the properties of intermetallic compounds to weaken the brittle tendency of solder joints, whether they are from the solder itself, the interface coating or external conditions. In addition, the reuse of solid waste resources of electronic products is also a new theme of green connection, and the design of electronic products should also consider the convenience of recycling. Methods of recovering valuable rare elements from electronic products is also an important issue.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez
Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang
Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
