

## Special Issue

# Hydrogen Embrittlement of Metals and Alloys

### Message from the Guest Editors

Hydrogen plays a pivotal role in decarbonising sectors in which emissions are difficult to remove, including heavy goods vehicles, maritime, aerospace and power generation, etc. This will not only increase the demand for clean hydrogen production but also promote material development across the hydrogen supply chain, from improving hydrogen generation infrastructures, to designing large hydrogen storage systems and fast hydrogen transportation networks, as well as employing hydrogen as an energy vector. Metals are widely utilized across these applications, and it is critical to understand how hydrogen may affect their structural integrity under existing and new operating environments. In this Special Issue, we welcome submissions on the fundamental and applied research of Hydrogen Embrittlement in Metals, with the aim of addressing known challenges relating to structural components of the hydrogen supply chain. Topics on the mechanisms of hydrogen-related mechanical degradation, hydrogen adsorption, diffusion, and trapping, as well as on the development of novel hydrogen-tolerant materials are welcome.

### Guest Editors

Dr. Enrique Galindo-Nava

Department of Mechanical Engineering, University College London, Torrington Place, London WC1E 7JE, UK

Prof. Dr. Wenwen Song

Institute of Materials Engineering (IfW), University of Kassel, Moencheberg Str. 3, 34125 Kassel, Germany

### Deadline for manuscript submissions

closed (25 March 2026)

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei  
Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.7 days after  
submission; acceptance to publication is undertaken in 2.7  
days (median values for papers published in this journal in  
the second half of 2025).
