

Special Issue

Manufacture, Mechanical Properties and Metallurgy of Metallic Biomaterials

Message from the Guest Editor

Metallic biomaterials have been successfully used since the last century, with a great impact on millions of people around the world. There are many applications in orthopedic (bone plates, screws, and hip and knee artificial joints), dentistry (dental implants, bridges, dentures, etc.), cardiology (blood vessels fixation devices, vascular stents, catheter guide wires, artificial heart valves, and pacemakers), and other applications like surgical kits or metallic devices that interact with human soft tissues. Examples of relevant topics include the following:

- Manufacturing processes: machining, forming, casting, and additive manufacturing, as well as other manufacturing process.
- Mechanical properties related to specific manufacturing parameters and processes.
- Metallurgy of alloys employed for biomedical applications.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
