Special Issue

Advanced Simulation Technologies of Metallurgical Processing

Message from the Guest Editor

Traditional models describing metallurgical processes such as sintering, precipitation, solidification, etc. range from turbulent flow to multi-phase flow models including heat transfer. However, at the heart of these processes very complex multi-phase and multi-physics processes including complex chemistry, often spanning multiple time and length scales, take place. Under these circumstances, empirical data is difficult to obtain and modelling is a complementary and promising path. In conjunction with experimental data, an analysis of predicted results furnishes a deeper insight into the physics. Furthermore, modelling is a welcomed tool to analyse metallurgical processes in depth such as a blast furnace due to the high costs and energy consumption. In fact, process simulations derived from versatile mathematical, physical or data-driven models have the potential of effective analysis tools to improve metallurgical processes, resulting in enhanced quality at lower costs and often contribute to a higher sustainability. Therefore, the special issue is intended to collect latest developments on advanced simulation technologies for metallurgical processes and also identifying gaps.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez
Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang
Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
