

Special Issue

Toward Achieving a Carbon-Neutral Society: Beneficiation and Extractive Metallurgy for Producing Critical Metals from Ores/Wastes

Message from the Guest Editors

The global climate change crisis has become a major issue in recent years, and it has forced us to pursue carbon neutrality as our common, primary, and initiative goal. For this, more than 130 countries have set or considering setting a target of reducing the greenhouse gas (GHG) emissions to net-zero by 2050 by replacing fossil-fuel-based energy and transportation systems to low-carbon technologies. However, these technologies require vast amounts of metals per unit generation compared to that of conventional fossil generation. Thus, the sustainable production of metals critical to a low carbon future is of topical importance to combat CO₂-induced climate change. In this Special Issue, we invite articles that focus on recent advances in beneficiation and extractive metallurgy for producing critical metals from primary, as well as secondary resources, such as tailings, metallurgical residues, slags, E-wastes, or wastewater. We welcome not only research papers but also review papers, short communications, and case reports.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
