

Special Issue

High-Productivity Welding of Metals and Alloys

Message from the Guest Editor

Welding is one of the most common joining processes employed in the industry of metal and alloy structures. Nowadays, to be able to compete in the world of advanced joining technologies of materials and, further, to achieve competitive products, the key success factors are quality, productivity, and cost. Innovative welding technologies, such as robotised welding, hybrid welding, and multi-arc and multi-wire welding, need to be developed and applied in fabrication. Researchers worldwide are invited to contribute to this Special Issue, which aims to disseminate, on a large scale, the recent developments in high-productivity welding technologies, the behaviour of materials subjected to welding, the characterisation of welded joints, numerical modelling of fusion welding, and advanced industrial applications. Experimental studies and simulations covering the intercorrelation of process parameters, microstructure, and properties, such as strength, toughness, hardness, weldability, and corrosion resistance, are encouraged and welcomed.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2025).
