

Special Issue

Severe Plastic Deformation Techniques of Metal Alloys

Message from the Guest Editor

Plenty of effort has been devoted to targeting structural materials with optimized mechanical properties, especially in the fields of civil, medical, transportation, piping, aerospace, and energy engineering. Metallic material strength and ductility are two of the most important mechanical properties to be considered when designing these materials to be used for structural purposes. To obtain materials with a high strength and high ductility, significant changes of the microstructure are mandatory. In this respect, a drastic reduction of the metallic alloy grain size, possibly down to a nanoscale level, was shown to possess a good combination of high stress and high ductility, without sacrificing their specific strength.

Scope of the present Issue is to promote a collection of the latest research works and results on both the severe plastic deformation (SPD) techniques and approaches: bottom-up and top-down. This Issue aims at providing an overview of the state of the art of SPD techniques and achievements for different metallic materials and alloys.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18 days after
submission; acceptance to publication is undertaken in 2.6
days (median values for papers published in this journal in
the first half of 2025).
