

## Special Issue

# Spark Plasma Sintering-A Key Technology towards the Development of New Materials

### Message from the Guest Editor

Spark Plasma Sintering (SPS) and field-assisted consolidation technologies are representing a great opportunity for the production of new materials. Nevertheless, the challenge to achieve properties that cannot be obtained by other conventional methods is strictly related to know-how of this fast sintering process, which permits the production of near full dense materials, using lower temperatures and shorter time. The combination of SPS with severe plastic deformation processes like mechanical milling has been proved to be a suitable route for the development of nano- and ultrafine grained materials. Mechanical alloying with ceramic reinforcement has extended the benefits of SPS to the fabrication of composite materials. Moreover, SPS has also been successfully used for the development of functionally graded materials (FGM) and materials for many other applications. Aim of this Special Issue is to collect papers about SPS and field-assisted consolidation technologies of metals, alloys, and composite materials.

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei  
Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18.7 days after  
submission; acceptance to publication is undertaken in 2.7  
days (median values for papers published in this journal in  
the second half of 2025).
