

## Special Issue

# Corrosion Behavior and Surface Engineering of Metallic Materials

### Message from the Guest Editor

Metallic materials are widely used, especially in engineering, due to their versatility, strength, and recyclability. However, corrosion poses a major challenge, severely impacting their performance and lifespan. For instance, steel is extensively used in applications requiring resistance to extreme conditions, such as heavy loads and high temperatures. Despite its durability, steel and other metals are prone to corrosion, particularly when exposed to industrial fluids, leading to oxidation and reduced functionality. Corrosive fluid flow over metal surfaces, combined with mechanical stresses, accelerates corrosion. The presence of solids or suspended particles further exacerbates material degradation, making corrosion a global concern with significant economic implications. Recent advancements focus on protective coatings to enhance metal properties and preserve integrity under corrosive conditions. These coatings form a barrier, preventing direct exposure to corrosive environments, thereby extending the lifespan of metallic components and reducing maintenance costs.

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
