

Special Issue

Advances in Additive Manufacturing of Ti-Based Alloys: Processing and Simulation

Message from the Guest Editor

Titanium alloy has broad application prospects in various industrial fields, including shipbuilding, aerospace, and automobile manufacturing, due to its excellent physical and chemical properties such as low density, high-temperature resistance, and corrosion resistance. The additive manufacturing (AM) technology of titanium alloy solves the machining problem of precision structural parts and further increases the application range of titanium alloy. In the Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following: Atomization processing; Powder properties and characterization; AM technologies: laser/E-beam interaction with the powder; effect of processing parameters; on-line monitoring and control; process simulation and processing optimization; temperature field-cooling rate-strain-stress-component distortion; surface quality improvement; Post-processing: heat treatment; HIP; surface roughness reduced by mechanical-electrochemical treatment, welding, and assembly; post-processing microstructure and properties.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
