

Special Issue

Advanced Metallic Composites and Their Properties

Message from the Guest Editor

The current trend in the automobile and aerospace industries is to increase the use of lightweight materials and integrate them into products design in order to improve the fuel economy efficiency and reduce the weight. During the last two decades, the fully dense solid materials have lost slowly their applicability, while the use of metallic foams has experienced a rapid growth mainly due to their applications as core material in composite structures. Currently there is much interest in *Metallic Foam Sandwiches* and *Metallic Foam-Filled Sections* composites, mainly because such materials have been integrated into just about every field of today's engineering world. Their crashworthiness behavior has a fundamental importance in the safety design of vehicles because their plastic collapse is the mechanism used to dissipate the kinetic energy of the vehicle in a controllable manner. This Special Issue represents a good opportunity for researchers to disseminate different aspects of their work related to recent developments in advanced composite metal foams and their properties. Research articles, communications and review articles are invited for this Special Issue.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
