## Advances in Magnetic Alloys

### Message from the Guest Editor

A magnetic alloy is a combination of different metals that contains, but are not limited to, at least one of the three main magnetic elements: iron (Fe), nickel (Ni), or cobalt (Co), etc. The strongest magnetic element is iron, which allows items made out of these alloys to attract to magnets. Based on magnetisation type the magnetic alloys can be divided in two categories: 1) **Soft** magnetic materials—characterized by a very narrow hysteresis cycle (coercivity below about  $103 \text{ A m}^{-1}$ ) and, therefore, by the ease with which they can be magnetized, even in weak magnetic fields. 2) **Hard** magnetic materials—characterized by a wide hysteresis cycle (coercivity above about  $104 \text{ A m}^{-1}$ ), a high remanence and a high energy product (maximum volume of energy density that the magnet can provide externally as an independent source). In particular, there is a more recently defined class of magnetic materials called **semi-hard** magnetic materials, dedicated to magnetic recording media. The hysteresis cycle of these materials is quite wide, but slightly narrower than that of permanent magnets.

## About the Journal

### Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei  
Compendex, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 18 days after  
submission; acceptance to publication is undertaken in 2.6  
days (median values for papers published in this journal in  
the first half of 2025).
