Special Issue

Advances in Casting, Thermomechanical and Heat Treatments of Aluminum Alloy

Message from the Guest Editor

Aluminum and its alloys are widely used in automobiles, aircraft, shipbuilding and other industries due to a good combination of technological characteristics, such as light weight, good mechanical properties, corrosion resistance and technological properties under casting and deformation. Products from aluminum allovs are obtained by casting and thermomechanical treatment. The microstructure, phase composition that forms during casting, heat treatment, and thermomechanical treatment define the final properties and applications of the materials. The optimization of the structure and phase composition of alloys and the search for promising alloying systems and elements for the development of new materials with enhanced operational and technological properties is an urgent task, including for expanding the use of aluminum alloys and improving the level of technology.

Research articles focusing on the development of prospective Al alloys, optimization of casting and deformation technology, and investigation of the evaluation of the structure and phase composition under casting and heat and thermomechanical treatment are encouraged.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
