

Special Issue

Clean Ironmaking and Steelmaking Processes

Message from the Guest Editors

The iron and steel industry is a major emitter of CO₂, especially in ironmaking and steelmaking processes. In the context of global low-carbon development, there is an urgent need for innovation in energy-saving and carbon reduction technology in the iron and steel industry. On one hand, iron and steel enterprises realize the transformation of energy structure by improving production processes, updating production equipment and using low-carbon energy. On the other hand, iron and steel enterprises and research institutes have committed to the development of deep decarbonization and zero carbon technologies. In recent years, clean ironmaking and steelmaking processes have been developing rapidly, especially in energy conservation, high efficiency, carbon emission reduction, energy structure adjustment, hydrogen metallurgy, electric arc furnace steelmaking, novel ironmaking and steelmaking technologies, and so on.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the second half of 2025).
