

## Special Issue

# Corrosion Behavior of Carbon Steels in Natural and Industrial Environments

### Message from the Guest Editor

Carbon steels are iron–carbon alloys containing up to 2% carbon with manganese, silicon, sulfur, and phosphorus as main impurities, and are usually soft and have low strength. However, because of their low cost and high ductility, which imparts excellent machining and welding properties, they are the most common metallic materials used in structures and metallic parts exposed to a wide variety of conditions. Carbon steel degradation upon exposure to natural environments—either water bodies or atmospheric—is the mayor issue concerning the cost of metallic corrosion in all sectors of engineering. This Special Issue titled “Corrosion Behavior of Steels in Natural and Industrial Environments” addresses all relevant aspects of carbon steel corrosion including basic corrosion mechanisms in atmospheric conditions or aqueous media, kinetic studies under quiescent and hydrodynamic conditions, different forms of corrosion, instrumental analysis for corrosion product characterization, surface morphology and corrosion rate, and biocorrosion. Issues of corrosion prevention are also welcome.

## About the Journal

### Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /  
CiteScore - Q1 (Metals and Alloys)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
