# Corrosion and Protection of Metallic Materials in Extreme Environments

## Message from the Guest Editor

One of the main drawbacks to the use of metallic materials is the degradation and deterioration of their properties by the action of the surrounding environment due to electrochemical corrosion. As new applications appear in the main industrial fields involving harsh media, the minimum requirements demanded of traditional alloys have increased. It is for this reason that the development of new materials has become a fruitful object of research in materials science and technology. In order to achieve this goal, a careful characterization and understanding of the complex processes of corrosion on the surface of the new candidate materials are needed. Moreover, apart from the straightforward approach of using bulk alloys with improved corrosion resistance, the application of a protective coating to the metallic substrate is another effective technique. Therefore, this Special Issue of *Metals* will be devoted to illustrating the state-of-the-art in the study of electrochemical behavior and corrosion resistance of alloys of industrial interest. We also encourage authors reporting new breakthroughs in the field of protective coatings to participate.

## **About the Journal**

## Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

#### Editor-in-Chief

### Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

#### **Author Benefits**

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

### **Journal Rank:**

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

### **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
