Crystal Plastic Deformation Mechanism of Metallic Materials

Message from the Guest Editors

Crystal plasticity is an inherently multiscale process starting at the atomic scale where dislocation cores, the regions in the immediate vicinity of dislocation lines, control a number of local properties, including the selection of glide planes and corresponding dislocation mobility, cross-slip, and nucleation processes. Crystal plasticity, in contrast to classical macroscopic plasticity, has a clear physical basis and always includes explicit microscopic information of the material. Crystal plasticity theory has long been adopted to study deformation behaviors of metallic materials subjected to both quasi-static and dynamic plastic deformation. Our Special Issue aims to provide a timely review of research in the rapidly developing subject area of crystal plasticity. We would like to invite you to submit either research articles or review papers to the Special Issue. Specific topics of interests include (but are not limited to): microstructure and texture evolutions, design and processing of metallic materials, phase transformations and mechanical properties, deformation mechanism, dynamic mechanics, numerical modeling, dynamic recrystallizations, and 3D printing and corrosion.

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
