

Special Issue

Dental Alloys for CAD/CAM

Message from the Guest Editors

The production of metallic restorations in the dental field has conventionally been carried out using the lost wax casting technique. In the last decade, however, computer-aided design/computer-assisted manufacturing (CAD/CAM) technologies have revolutionized dental manufacturing processes. The CAM milling process, which is based on subtractive manufacturing, was introduced for the production of dental restorations, together with the traditional casting technique. Thereafter, additive manufacturing was also introduced. In dentistry, these new CAD/CAM-based techniques may well replace the traditional casting technique. We cordially invite you to submit a manuscript to the upcoming Special Issue on “Dental Alloys for CAD/CAM”. The aim of this Special Issue is to advance the state of knowledge and expertise in the field of CAD/CAM dental alloys. This Special Issue will include original research articles, research articles, reviews, and clinical case reports.

Guest Editors

Prof. Dr. Tae-Yub Kwon

Department of Dental Biomaterials, School of Dentistry, and Institute for Biomaterials Research & Development, Kyungpook National University, Daegu, Korea

Prof. Dr. Du-Hyeong Lee

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
