

Special Issue

Environmental Effect on Metal Joining

Message from the Guest Editor

Recent years, industries play an essential role in decarbonizing and building a greener future. This can involve the introduction of new materials, which must be characterized by a combination of high performances and lightness. This fact results in new manufacturing techniques, and especially, in new alternative joining technologies. Experimental and numerical approaches allow for directing the choice towards one technology rather than another. Among the most promising technologies, are friction stir welding, self-piercing riveting, orbital riveting, adhesive bonding, clinching, etc. These technologies can be used to connect not only similar metals but also different materials. Moreover, they can be combined in a hybrid joining. These combinations of materials and joining technologies require particular attention to be focused on durability and corrosion resistance within aggressive environments. For this Special Issue of Metals, we welcome reviews and articles in the areas of technologies of joining, joint configurations, mechanical testing, failure modes, similar or dissimilar materials, finite element analysis, durability, and corrosion resistance.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering,
State Key Laboratory for Advanced Metals and Materials, University of
Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083,
China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei
Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 18.7 days after
submission; acceptance to publication is undertaken in 2.7
days (median values for papers published in this journal in
the second half of 2025).
