Special Issue

Explosive Welding and Impact Mechanics of Metal and Alloys

Message from the Guest Editors

For the realization of multi-material components, the use of explosive welding is one of the leading candidates for the reliability of bonding strengths at the interface. The technique has a long history; developed and industrialized after WWII, the bonding mechanism is still discussed today due to some uncertain issues at extremely high rates of deformation. Based on the recent progress in high-speed imaging and numerical simulation techniques, the deformation process is being clarified in more detail. Additionally, it is now possible for microstructures to be characterized by advanced equipment which has recently been developed. This Special Issue is proposed to summarize such achievements on explosive welding and other high-rate material processing technologies. The guest editors are welcoming submissions to discuss the microstructure and/or the impact mechanics of various materials at high strain rates.

About the Journal

Message from the Editor-in-Chief

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editor-in-Chief

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) / CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
