

Special Issue

Grinding and Concentration Technology of Critical Metals

Message from the Guest Editor

The global raw materials sector is expected to experience a noticeable shift towards new production methods in the coming decades. Climate change, cleaner production ways, and circular economy requirements must be conjugated to make new production routes greener, cleaner, and more efficient. This is going to be especially crucial in the case of the sources of critical metals. In the particular case of grinding operations, which is estimated to be up to 4% of global energy consumption—with very low efficiency—a really big challenge is faced. The purpose of this Special Issue is to provide papers featuring the latest developments in the field of grinding technology applied to the production of critical metals from primary and secondary resources. This Special Issue welcomes work conducted in the following research areas: modeling and simulation in critical metals comminution, improvements in energy efficiency in conventional comminution, and new strategies to reduce grindability in critical metals ores (physical or chemical: grinding aids, microwave pretreatments, electrofragmentation, etc).

About the Journal

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, Ei Compendex, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Metallurgy and Metallurgical Engineering) /
CiteScore - Q1 (Metals and Alloys)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
